

# Having a blood test in hospital.

**Hull Royal  
Infirmary**

**Castle Hill  
Hospital**

Your blood can tell  
us if anything is  
wrong.

The person who  
takes your blood  
may be a **nurse, a  
doctor or someone  
who is trained to  
take blood.**

# Your doctor fills in a blood test form.

Blood will usually be taken from your arm.

This is what we will  
use to take your  
blood.

Your arm may hurt a little. We can use a special cream that can help.

# Can we take your blood please?

Please could  
you roll up  
your sleeve.

What is the  
problem?  
Talk to your  
blood taker.

The blood taker will wear gloves.

The blood taker will put a band around your arm.

The blood taker will touch your arm and look for a vein.

The blood taker will clean your skin. This may feel cold.
